

Our objective is to reduce our impact on the environment including factors contributing to climate change, through a commitment to continual improvement, complying with environmental legislation and regulations in the jurisdictions where Group companies operate to ensure that our major impacts are addressed.

Energy use (Carbon emissions)

We continually seek to reduce the amount of fuel used by our fleet by the introduction of energy efficient vehicles, routing systems and improving drivers' skills. Further we strive to reduce the electricity we use for lighting our warehouses by the use of available power saving technologies including the use of new solar panelling from September 2012 and where possible appropriate building modifications. We only heat warehouses where necessary due to either regulations and/or cold weather conditions.

Waste

We promote reduction of waste through elimination of packaging and encourage reuse and recycling throughout our operations .

In addition

Ensure our suppliers are environmentally compliant in their field.

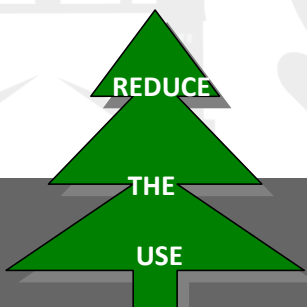

Encourage recycling within our business.

Supply aluminium free packaging for vending ingredients.

Compliance with the European WEEE directive (Waste Electrical and Electronic Equipment) for recycling used vending machines.

100% Carbon Neutral machines in the range

Offer energy efficient technology to switch off the lights and reduce the power consumptions your vending machine during quieter periods.
